BIBLIOGRAPHY AND SUBJECT-INDEX OF BRAZILIAN GEOLOGY
(LANGUAGES OTHER THAN PORTUGUESE)

I. INTRODUCTION

This bibliography comprises 514 references on Brazilian geology, in languages other than Portuguese (mainly English, German and French, with some titles in Dutch, Swedish, and Russian). The compilation was aimed at accentuating economic and regional geology. The bibliography must not be considered to be a comprehensive one. It lists a selection of articles catalogued in Volumes 1 to 39 of the *BIBLIOGRAPHY AND INDEX OF GEOLOGY*, published by the Geological Society of America. It should be used only in a first attempt to list references on a particular topic, and can be supplemented by consulting references cited in the articles compiled here. In addition, any serious student of a topic on Brazilian geology will need to consult the Portuguese-language articles, which number more than twice as many as those in non-Portuguese languages.

The bibliography has been subject-indexed into nine major headings (A to G), with a total of 78 sub-headings. The articles pertaining to any subject index heading can be ascertained from the numeral (or numerals) following that heading.

It has not been possible to read the contents of each paper. Consequently, subject-indexing was done only on the basis of the article title. In many of the general geological papers, the title cannot adequately summarize the contents of the entire paper. Some subject-index headings could thus be supplemented by a reading of papers on general geology.
