THE EGRU INFORMATION CIRCULARS 201 - 300

In March 1988 the Economic Geology Research Unit published Information Circular No. 200 entitled: "The EGRU Information Circulars: the First Two Hundred". This circular, compiled by D.A. Pretorius and L. Tyler, listed the titles and authors of the Information Circulars produced subsequent to EGRU's founding on 5 October 1957. The initial staff attained its full compliment only on 4 November, 1959 and the first Information Circular was issued in August, 1960. The first two hundred circulars were thus produced over a period of 28 years at an average rate of approximately 7 circulars per annum.

This Information Circular (No. 300) lists the titles of the third one hundred scientific communications produced by EGRU over a period of 8 years, at an average rate of approximately 12 circulars per annum. Prior to 1989 most of EGRU's circulars were prepared by staff and students directly attached to the Research Unit, but following the merger of EGRU with the Department of Geology a larger pool of earth scientists at the University of the Witwatersrand were encouraged to contribute to the Information Circular series. To the end of 1992 the Information Circulars were distributed free of charge to local and overseas mining companies, universities, libraries and individuals on a restricted mailing list, but because of increasing production costs the decision was taken by EGRU's Board of Control to implement a subscription charge from 1993 onwards. Encouragingly, support for this development was received from most quarters and EGRU currently endeavours to publish an average of 12 circulars each year, in addition to the EGRU Annual Report. A percentage of circulars are also forwarded to organizations worldwide on an exchange relationship and subscriptions help to defray a little more than half the production costs. The remaining expenses are borne by an annual grant from the University of the Witwatersrand which contributes to the funding of EGRU's research activities.

Because of the restricted number of circulars produced for distribution and because the series does not have accredited status as a journal, authors of the reports are free to submit the contents of their work for formal publication after such reports have been issued. It is estimated that over the years approximately 60 per cent of the material produced in EGRU circulars has been published in established local or international earth science journals.
